The last couple of decades have witnessed ground breaking advances in health and medical technology which has resulted in the improvement of disease diagnosis, monitoring of treatment and sustaining health. Health technology research could be in the form of procedures, vaccines, devices and systems as outlined by the world health organization in its Health technology assessment report. Scientists in the field of medical and health technology are continuously inventing new devices, improving existing procedures and developing new techniques in the hope of improving medical practice and health monitoring. Some of the latest research and innovations in health and medical techniques have made an impressive difference, saved and improved the quality of countless lives worldwide. Collaborative work from scientists all around the world is necessary to tackle current health problems faced by the growing world population. The journal of techniques hopes to attract a global audience by its commitment to publishing the latest innovations and techniques related to medical and health topics.

One of the topics of interest of Journal of techniques is medical laboratory research involving techniques related to microbiology, biotechnology, biochemistry, immunology and their associated disciplines. Another topic of interest is research focusing on the techniques and devices of physiotherapy and rehabilitation. Research conducted on the latest advances of radiology techniques such as ultrasound, X-ray radiography, and computed tomography (CT) is also another area that the journal of techniques hopes to publishes in. Research carried out on techniques relating to all branches of anaesthesia is also welcomed. Among the scope of the journal is community health related topics such as techniques relating to epidemiology, nutrition, public health and community healthcare. Ophthalmic technology and research focusing on operating eye examination equipment, diagnosis of eye disease and eye care are also topics of interest. Among the scope of the journal is research on the current and forthcoming innovations of prosthetic techniques that help in prosthetic dentistry practice. The Journal of techniques is not limited to the above topics and is open to receive submissions in any discipline relating to medical and health techniques.

The Journal of Techniques is an open-access peer reviewed journal that accepts submissions in the form of original research, case reports and reviews which make a substantial contribution to health and medical science. This journal is not limited to publishing research carried out in Iraq and is open for submissions from different parts of the world as long as being. All submissions will be subjected to a rigorous peer review process from experts in the field.
